PREVENT CONTAMINATION AND SPILLS

NO GLOVES ON DOOR HANDLES OR OTHER COMMON TOUCH SURFACES

• Do not touch common surfaces with gloves, even if your gloves are clean
  • This includes all door handles, computers, phones, etc.
• Open doors with a bare hand—use the “ONE GLOVE RULE” if necessary to protect yourself while transporting chemical and biological materials

TRANSPORT ALL CHEMICAL AND BIOLOGICAL MATERIALS USING SECONDARY CONTAINMENT

• Transport all chemical and biological materials in corridors using secondary containment such as bottle carriers, trays or plastic totes, sealed bags, push carts, etc.
  • This includes bottles, vials, gel trays, etc.
  • Use a buddy system if necessary to open doors for you
• When using proper secondary containment, most chemical and biological materials can be safely transported without any gloves on
